

Smart Rann of Kutch Eco-Tourism & Carrying Capacity Planner

Domain

Tourism

The Challenge

The Rann Utsav and Kutch region attract heavy seasonal tourist inflow, creating pressure on fragile desert ecology, local water resources, and infrastructure.

Visitors also lack proper guidance about sustainable travel options and lesser-known eco-tourism alternatives.

Objective

Build Agentic AI solutions that manage tourist load, recommend sustainable travel itineraries, and protect ecologically sensitive zones in Kutch and surrounding regions.

Suggested AI Agents

1. Tourist Load Forecasting Agent

- Predicts tourist crowd levels.
- Helps manage seasonal tourist flow.

2. Sustainable Itinerary Recommendation Agent

- Recommends eco-friendly travel plans.
- Suggests sustainable and lesser-known destinations.

3. Ecological Carrying Capacity Agent

- Monitors environmental limits.
- Helps protect sensitive ecological areas.

4. Local Artisan & Community Linkage Agent

- Connects tourists with local artisans.
- Supports local communities.

5. Tourism Impact Dashboard Agent

- Provides tourism analytics.

- Tracks environmental and visitor impact.
